The design starts with a critique of the traditional horizontal, all-in-one model of vertical development. The project seeks to reclaim the verticality of high-rise buildings, making them more than just points along the skyline – an active space that extends to the ground, roof, and sky, engaging with the city's public spaces and offering new possibilities for urban life.

At the building scale, the project seeks to draw the activity and vibrancy of public spaces and streets into the sky. A series of towers is proposed, each conceived as a vertical public space that connects the ground with the sky. This connection is achieved through a series of vertical public spaces, each linked to the next through a network of public plazas, parks, and gardens. The towers are interlinked by a series of vertical public spaces, creating a vibrant, continuous public realm that extends from the ground to the sky.

The project also seeks to create a sense of community and belonging, with public spaces that are designed to be inclusive and accessible to all. The towers are connected by a series of public plazas, parks, and gardens, creating a continuous public realm that extends from the ground to the sky. The project also seeks to create a sense of community and belonging, with public spaces that are designed to be inclusive and accessible to all.
